

Are you interested in the intersection of art and science?

Then you will want to know about ASCI (Art & Science Collaborations, Inc.), a nonprofit organization founded in 1988 and based in New York City. ASCI was instrumental in re-invigorating the art&tech field in the United States during the 1990's and helped birth the nascent field of art&science via four, ArtSci international symposia from 1998-2002.

ASCI Members are an international group of artists, scientists, technologists, professors, writers, curators, gallerists, and others working in or fascinated by the intersection of art, science, technology, and the humanities. Membership is open and fees are modest. See Members Homepage Listing; Click "join" at our website for info.

ASCI Services:

Renowned as one of the most comprehensive and efficient tools for staying informed about this eclectic, multidisciplinary field. It is emailed monthly to ASCI members -- sample is at website.

Annual, international digital print competition and exhibition showcases artwork made by computers. The exhibition is held at the New York Hall of Science and online.

An online tool for nurturing collaboration by assisting with matching talent to projects seeking collaborators. FREE! This tool could be customized for your university – contact us.

- **Monthly Meetings**
@ Hunter College
(see website "ASCI News" for details)
- **Website & Archives**
"Search" tool will find those working with science topics; new/old media, etc.
